

SmartHome Thermostat X200 — User Guide

This fictional document is provided as a test dataset for a retrieval-augmented generation system.

1. Product Overview

The SmartHome Thermostat X200 is a Wi-Fi enabled thermostat designed for residential heating and cooling systems. It supports scheduled temperature changes, remote control through the SmartHome mobile application, and automatic comfort adjustments based on configured preferences.

2. Technical Specifications

Specification	Value
Model	X200
Display	4.3-inch color touchscreen
Wi-Fi	2.4 GHz and 5 GHz
Operating temperature	0°C to 45°C
Temperature range	10°C to 35°C
Power	24V AC or compatible adapter
Warranty	2 years

3. Installation

Before installation, switch off power to the existing thermostat circuit. Connect the wires according to the terminal labels on the X200. The thermostat should be mounted approximately 1.5 meters above the floor and away from direct sunlight, doors, windows, and heat-producing appliances.

4. Mobile Application

The SmartHome application can be used to view the current temperature, change the target temperature, create weekly schedules, and receive device notifications. The thermostat must be connected to Wi-Fi before remote control is available.

5. Scheduling

Users can create up to 8 schedule periods per day. Each schedule period can specify a target temperature and start time. A schedule can be temporarily overridden from the thermostat or mobile application without deleting the configured schedule.

6. Energy Saving Mode

Energy Saving Mode adjusts the target temperature to reduce heating or cooling demand. The default Energy Saving Mode targets are 18°C for heating and 26°C for cooling. Users may change these targets in the device settings.

7. Troubleshooting

If the display is blank, verify that the thermostat is receiving power. If remote control is unavailable, check the Wi-Fi connection and confirm that the thermostat is connected to the same account used by the mobile

application. If the device repeatedly restarts, disconnect power and contact SmartHome support.

8. Warranty

The X200 includes a two-year limited warranty covering manufacturing defects under normal residential use. The warranty does not cover damage caused by incorrect installation, water exposure, physical impact, or unauthorized modification.
