

Darshan Gaikwad

Backend / Frappe Developer | Python | REST APIs | ERPNext | Database Integrations

Lonavala, Pune | +91-9623774952 | darshangaikwad0199@gmail.com

Professional Summary

Software professional with 3+ years of experience in backend-facing enterprise applications, REST APIs, integrations, SQL-based investigation, production troubleshooting, and release validation. Hands-on with Python, PostgreSQL, MariaDB/MySQL, Git, Linux, REST APIs, webhooks, and backend services. Experienced in building API workflows, validating data integrity, troubleshooting integrations, and collaborating with engineering and product teams. Strong foundation for custom Frappe/ERPNext application development, backend services, APIs, database work, and third-party integrations.

Key Skills

Frappe/ERPNext: Frappe Framework, ERPNext, DocTypes, Controllers, Hooks, Scheduler Events, Custom Applications

Backend: Python, REST APIs, JSON, Webhooks, API Integrations, Authentication, Backend Services

Databases: MariaDB/MySQL, PostgreSQL, SQL, Database Validation, Data Integrity, Query Troubleshooting

Systems/Tools: Linux, Bash/Shell Concepts, Git, Docker, AWS Logs, Redis

Engineering: Integration Testing, Root Cause Analysis, Deployment Validation, Release Verification, Technical Documentation

Professional Experience

Conversive (SMS Magic), Pune, India

Jan 2026–Present

Technical Support Engineer II

- Reproduced and resolved enterprise application and integration incidents across REST APIs, webhooks, CRM workflows, and backend services.
- Executed SQL queries and API debugging to validate backend data, investigate inconsistencies, analyze failures, and perform root-cause analysis.
- Created API workflows and automation documentation while collaborating with engineering and product teams on fixes, deployments, configurations, and production readiness.
- Supported reliable customer-facing workflows through structured troubleshooting, integration validation, and reusable technical knowledge.

ElasticRun, Pune, India

Nov 2024–Oct 2025

Junior Engineer

- Troubleshoot backend services supporting eCommerce and Warehouse Management applications through production monitoring and structured technical validation.
- Analyzed AWS logs and backend behavior to reproduce failures, validate application and data behavior, and isolate recurring production issues.
- Performed deployment validation and release verification with DevOps teams, checking application stability following production changes.
- Applied root-cause analysis and documented findings to improve application reliability and accelerate issue resolution.

DynPro Pvt. Ltd., Pune, India

Oct 2022–Nov 2024

Technical Support Analyst

- Investigated enterprise SaaS and web application issues involving authentication, configurations, API integrations, application behavior, and data accuracy.
- Validated REST integrations and backend data while reproducing customer-reported defects and communicating actionable technical findings to engineering teams.
- Managed production configurations and user-access activities with emphasis on data integrity, service continuity, and controlled changes.
- Collaborated with cross-functional teams to document resolutions and support reliable application delivery.

Projects

RAG AI System — Built a document-retrieval application using FastAPI, LangChain, HuggingFace embeddings, and ChromaDB for retrieval-augmented responses.

Education

Bachelor of Engineering (Computer Science) — Suma Ramesh Tulsiani Technical Campus, Pune **CGPA: 8.91**
