

Non-SF Knowledge Base Test Document

Category: **Non Sf**

Purpose: Controlled document for RAG retrieval and answer-quality testing.

Zoho CRM

Zoho CRM workflows can trigger actions when configured criteria are satisfied.

A custom function can update CRM records, copy values between modules, and call external APIs.

The Contacts, Leads, Deals, and Events modules can be connected through CRM relationships and custom automation.

Meeting Reminders

A meeting reminder workflow can be configured to send a reminder several days before the meeting date.

A reminder should only be sent when the required confirmation conditions are satisfied.

For example, a workflow may exclude contacts whose Confirmed checkbox is already enabled.

API Troubleshooting

When an API returns a successful queue response but no record appears in the portal, verify the request payload, endpoint, authentication, and downstream processing.

HTTP 404 indicates that the requested route was not found.

Testing note: Questions should be answered only from information contained in this document.
